8. DERIVATIVE INSTRUMENTS

- A. The Company is exposed to the credit worthiness of the institutions from which it purchases its S&P 500 Index options and these institutions' continued abilities to perform according to the terms of the contracts. The current values for the credit exposure have been affected by fluctuations in the S&P 500 Index. The Company's maximum credit risk exposure would require an increase of 15.3% in the value of the S&P 500 Index. The maximum credit risk is calculated using the cap strike price of the Company's S&P 500 Index options less the floor price, multiplied by the notional amount of the S&P 500 Index options.

As the Company uses a central counterparty ("CCP") to clear its interest rate swaps, the Company is exposed to the default of the CCP. Transactions with the CCP require the Company to pledge initial and variation margin collateral. The Company has pledged cash and bonds as collateral to the CCP. The Company maintains beneficial ownership of the collateral, which is classified as either cash, cash equivalents and short-term investments on Page 2, Line 5 or bonds on Page 2, Line 1.

The following table sets forth collateral pledged to the CCP:

	Cash		Bonds		Total	
	9/30/2015	12/31/2014	9/30/2015	12/31/2014	9/30/2015	12/31/2014
Central counterparty						
Initial margin collateral	\$ 11,325,943	\$ 5,245,875	\$ 13,967,628	\$ -	\$ 25,293,571	\$ 5,245,875
Variation margin collateral	8,480,291	6,924,610	-	-	8,480,291	6,924,610
Total central counterparty	<u>\$ 19,806,234</u>	<u>\$ 12,170,485</u>	<u>\$ 13,967,628</u>	<u>\$ -</u>	<u>\$ 33,773,862</u>	<u>\$ 12,170,485</u>

- B. The Company sells indexed annuities, which permit the holder to allocate their deposit between a fixed interest rate return and an indexed return, where interest credited to the contracts is based on the performance of the S&P 500 Index, subject to an upper limit or cap and minimum guarantees. The index-based interest guarantees do not qualify for hedge accounting. Policyholders may elect to rebalance between interest crediting options at renewal dates annually. At each renewal date, the Company has the opportunity to re-price the indexed component by changing the cap, subject to minimum guarantees. The Company purchases S&P 500 Index options for its interest crediting strategy used in its indexed annuity product. These investments are highly correlated to the portfolio allocation decisions of its policyholders, such that the Company is economically hedged with respect to index-based interest rate guarantees for the current reset period.

The Company uses interest rate swaps to reduce risks from changes in interest rates, to manage interest rate exposures arising from asset and liability mismatches, and to protect the value of the Company's investments. By means of these contracts, the Company agrees with a counterparty to exchange, at specified intervals, the difference between fixed rate and floating rate interest amounts as calculated by reference to agreed notional amounts.

- C. The Company designates and accounts for fair value hedges under hedge accounting when they have met the criteria requirements of SSAP No. 86, *Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions* ("SSAP 86"). To qualify for hedge accounting under SSAP 86, at the inception of the hedge, the Company documents its risk management objective and strategy for undertaking the hedging transaction, as well as its designation of the hedge as either: (i) a hedge of the estimated fair value of a recognized asset or liability ("fair value hedge"); or (ii) a hedge of a forecasted transaction or the variability of cash flows to be received or paid related to the recognized asset or liability ("cash flow hedge"). A derivative must be highly effective in mitigating the designated risk of the hedged item. Effectiveness of the hedge is assessed at inception and throughout the life of the hedging relationship. In hedge transactions which qualify for hedge accounting, the change in the carrying value of the derivative is recorded in a manner consistent with the changes in the carrying value of the hedged item. In measuring effectiveness, no component of the derivative's gain or loss is excluded. Upon termination of a derivative that qualified for hedge accounting, the gain or loss is reflected as an adjustment to the basis of the hedged item and is recognized in income consistent with the hedged item.

If the Company chooses to not designate its derivatives for hedge accounting or designated derivatives no longer meet the criteria of an effective hedge, the changes in their fair value are included in "Change in net unrealized capital gains (losses)" without considering changes in fair value of the hedged item. Accruals of interest income, expense and related cash flows on interest rate swaps are reported in "Net investment income". Upon termination of a derivative that does not qualify for hedge accounting, the gain or loss is included in "Net realized capital gains (losses)". In addition, when realized gains or losses on interest-rate related derivatives are recognized, they are amortized through the interest maintenance reserve.

- D. The Company's net unrealized capital loss from derivatives excluded from assessment of hedge effectiveness was \$4.6 million at September 30, 2015 and a net unrealized capital gain of \$3.9 million at September 30, 2014.
- E. The Company's derivatives that originally were designated for hedge accounting still qualified for hedge accounting at September 30, 2015. Therefore, the Company did not recognize any unrealized gains or losses for the first nine months of 2015 related to derivatives that no longer qualify for hedge accounting.

NOTES TO FINANCIAL STATEMENTS

- F. In the second quarter of 2015, the Company entered into interest rate swaps of \$252.9 million with external counterparties to mitigate interest rate risk exposure to overall changes in the future cash flows associated with StanCorp Financial Group, Inc. (“StanCorp”) junior subordinated debentures from June 1, 2017 through June 1, 2042. The Company entered into intercompany interest rate swaps with StanCorp for \$252.9 million with the exact offsetting terms as the external interest rate swaps to effectively transfer the economic risk to StanCorp. These interest rates swaps do not qualify for hedge accounting for the Company and as such the changes in fair value of the external and intercompany interest rate swaps are recorded in unrealized capital gains (losses) and reported in derivative assets and liabilities. The fair value of the interest rate swaps resulted in \$9.1 million of derivative assets and liabilities at September 30, 2015.

In the second quarter of 2015, the Company completed the purchase of \$115.0 million of par value of fixed maturity securities that were part of an anticipated bond purchase cash flow hedge strategy. The completion of this strategy resulted in \$9.7 million of losses that were recorded as realized capital losses. This amount, net of taxes, will be amortized into income through the interest maintenance reserve over a period exceeding 25 years.

(3) The Company recognizes transfers between fair value levels at the end of the reporting period.

(4) Valuation techniques and inputs used in the fair value measurement for assets and liabilities.

Assets and liabilities recorded at fair value are disclosed using a three-level hierarchy. The classification of assets and liabilities within the hierarchy is based on whether the inputs to the valuation methodology used for measurement are observable or unobservable. Observable inputs reflect market-derived or market-based information obtained from independent sources while unobservable inputs reflect the Company's estimates about market data.

The fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels: Level 1 inputs are based upon quoted prices in active markets for identical assets or liabilities that the Company can access at the measurement date. Level 2 inputs are based upon quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active and model-based valuation techniques for which all significant assumptions are observable in the market. Level 3 inputs are generated from model-based techniques that use significant assumptions not observable in the market. These unobservable assumptions reflect the Company's estimates of assumptions that market participants would use in pricing the asset or liability.

There are three types of valuation techniques used to measure assets and liabilities recorded at fair value:

- The market approach, which uses prices or other relevant information generated by market transactions involving identical or comparable assets or liabilities.
- The income approach, which uses the present value of cash flows or earnings.
- The cost approach, which uses replacement costs more readily adaptable for valuing physical assets.

The Company uses both the market and income approach in its fair value measurements. These measurements are discussed in more detail below.

Bonds

The bonds are diversified across industries, issuers and maturities. The Company calculates fair values for all classes of bonds using valuation techniques described below. They are placed into three levels depending on the valuation technique used to determine the fair value of the securities.

Fixed maturity securities are comprised of the following classes:

- U.S. government bonds.
- U.S. states, territories and possessions.
- U.S. special revenues bonds.
- Industrial and miscellaneous (unaffiliated) bonds.

The Company uses an independent pricing service to assist management in determining the fair value of these assets. The pricing service incorporates a variety of information observable in the market in its valuation techniques, including:

- Reported trading prices.
- Benchmark yields.
- Broker-dealer quotes.
- Benchmark securities.
- Bids and offers.
- Credit ratings.
- Relative credit information.
- Other reference data.

The pricing service also takes into account perceived market movements and sector news, as well as a bond's terms and conditions, including any features specific to that issue that may influence risk, and thus marketability. Depending on the security, the priority of the use of observable market inputs may change as some observable market inputs may not be relevant or additional inputs may be necessary. The Company generally obtains one value from its primary external pricing service. On a case-by-case basis, the Company may obtain further quotes or prices from additional parties as needed.

The pricing service provides quoted market prices when available. Quoted prices are not always available due to bond market inactivity. The pricing service obtains a broker quote when sufficient information, such as security structure or other market information, is not available to produce a valuation. Valuations and quotes obtained from third party commercial pricing services are non-binding and do not represent quotes on which one may execute the disposition of the assets.

NOTES TO FINANCIAL STATEMENTS

The significant unobservable inputs used in the fair value measurement of the reporting entity's bonds are valuations and quotes received from secondary pricing service, analytical reviews and broker quotes. Significant increases or decreases in any of those inputs in isolation would result in a significantly lower or higher fair value measurement. Generally, a change in the assumption used for the pricing evaluation is accompanied by a directionally similar change in the assumption used for the methodologies.

Certain bonds were valued using Level 3 inputs. The Level 3 bonds were valued using matrix pricing, independent broker quotes and other standard market valuation methodologies. The fair value was determined using inputs that were not observable or could not be derived principally from, or corroborated by, observable market data. These inputs included assumptions regarding liquidity, estimated future cash flows and discount rates. Unobservable inputs to these valuations are based on management's judgment or estimation obtained from the best sources available. The Company's valuations maximize the use of observable inputs, which include an analysis of securities in similar sectors with comparable maturity dates and bond ratings. Broker quotes are validated by management for reasonableness in conjunction with information obtained from matrix pricing and other sources.

The Company performs control procedures over the external valuations at least quarterly through a combination of procedures that include an evaluation of methodologies used by the pricing service, analytical reviews and performance analysis of the prices against statistics and trends, back testing of sales activity and maintenance of a securities watch list. As necessary, the Company compares prices received from the pricing service to prices independently estimated by the Company utilizing discounted cash flow models or through performing independent valuations of inputs and assumptions similar to those used by the pricing service in order to ensure prices represent a reasonable estimate of fair value. Although the Company does identify differences from time to time as a result of these validation procedures, the Company did not make any significant adjustments as of September 30, 2015 or December 31, 2014.

The fair values for bonds with a designated class of other than class 6 or 6FE that had other-than-temporary impairment were valued using Level 2 measurements. The Company principally uses the market and income approaches to measure these financial instruments at fair value.

Mortgage loans

For disclosure purposes, the fair values of commercial mortgage loans were estimated using an option-adjusted discounted cash flow valuation. The valuation includes both observable market inputs and estimated model parameters.

Significant observable inputs to the valuation include:

- Indicative quarter-end pricing for a package of loans similar to those originated by the Company near year-end.
- U.S. Government treasury yields.
- Indicative yields from industrial bond issues.
- The contractual terms of nearly every mortgage subject to valuation.

Significant estimated parameters include:

- A liquidity premium that is estimated from historical loan sales and is applied over and above base yields.
- Adjustments in interest rate spread based on an aggregate portfolio loan-to-value ratio, estimated from historical differential yields with respect to loan-to-value ratios.
- Projected prepayment activity.

Valuations for commercial mortgage loans measured at fair value on a nonrecurring basis using significant unobservable Level 3 inputs are sensitive to a number of variables, but are most sensitive to net operating income and the applied capitalization rate. Generally, an increase or decrease resulting from a change in the stabilized net operating income from the collateralized property would result in a directionally similar change in the fair value of the asset. An increase or decrease in the assumption for the capitalization rate would result in a directionally opposite change in the fair value of the asset.

S&P 500 Index options

S&P 500 Index options were valued using Level 3 inputs. The Level 3 fixed maturity securities were valued using matrix pricing, independent broker quotes and other standard market valuation methodologies. The fair value was determined using inputs that were not observable or could not be derived principally from, or corroborated by, observable market data. These inputs included assumptions regarding liquidity, estimated future cash flows and discount rates. Unobservable inputs to these valuations are based on management's judgment or estimation obtained from the best sources available. The Company's valuations maximize the use of observable inputs, which include an analysis of securities in similar sectors with comparable maturity dates and bond ratings. Broker quotes are validated by management for reasonableness in conjunction with information obtained from matrix pricing and other sources.

The Company calculates the fair value for its S&P 500 Index options using the Black-Scholes option pricing model and parameters derived from market sources. The Company's valuations maximize the use of observable inputs, which include direct price quotes from the Chicago Board Options Exchange ("CBOE") and values for on-the-run treasury securities and London Interbank Offered Rate as reported by Bloomberg. Unobservable inputs are estimated from the best sources available to the Company and include estimates of future gross dividends to be paid on the stocks underlying the S&P 500 Index, estimates of bid-ask spreads, and estimates of implied volatilities on options. Valuation parameters are calibrated to replicate the actual end-of-day market quotes for options trading on the CBOE. The Company performs additional validation procedures such as the daily observation of market activity and conditions and the tracking and analyzing of actual quotes provided by banking counterparties each time the Company purchases options from them. Additionally, in order to help validate the values derived through the procedures noted above, the Company obtains indicators of value from representative investment banks.

NOTES TO FINANCIAL STATEMENTS

While valuations for the S&P 500 Index options are sensitive to a number of variables, valuations for S&P 500 Index options purchased are most sensitive to changes in the estimates of bid ask spreads, or the S&P 500 Index value, and the implied volatilities of this index. Significant fluctuations in any of those inputs in isolation would result in a significantly lower or higher fair value measurement. Generally, an increase or decrease used in the assumption for the implied volatilities and in the S&P 500 Index value would result in a directionally similar change in the fair value of the asset.

Separate accounts assets

Separate account assets represent segregated funds held for the exclusive benefit of contract holders. The activities of the account primarily relate to participant-directed 401(k) contracts. Separate account assets are recorded at fair value on a recurring basis, with changes in fair value recorded to separate account liabilities. Separate account assets consist of mutual funds. The mutual funds' fair value is determined through Level 1 and Level 2 inputs. The majority of the separate account assets are valued using quoted prices in an active market with the remainder of the assets valued using quoted prices from an independent pricing service. The Company reviews the values obtained from the pricing service for reasonableness through analytical procedures and performance reviews.

Index-based Interest Guarantees

The Company uses the income approach valuation technique to determine the fair value of index-based interest guarantees. The liability is the present value of future cash flows attributable to the projected index growth in excess of cash flows driven by fixed interest rate guarantees for the indexed annuity product. Level 3 assumptions for policyholder behavior and future index crediting rate declarations significantly influence the calculation. Index-based interest guarantees are included in aggregate reserves on the Company's liabilities, surplus and other funds.

Valuations for the index-based interest guarantees are sensitive to a number of variables, but are most sensitive to the S&P 500 Index value, the implied volatilities of this index and the interest rate environment. Generally, a significant increase or decrease used in the assumption for the implied volatilities and in the S&P 500 Index value would result in a directionally similar change, while an increase or decrease in the interest rate environment would result in a directionally opposite change in the fair value of the liability.

Interest Rate Swaps

Interest rate swaps are hedging transactions that are recorded in a manner that is consistent with the hedged item. The Company uses the discounted cash flow valuation model to determine the fair value of the interest rate swaps. The inputs used in the model are observable in the market. The interest rate swaps qualify as Level 2 under the fair value hierarchy since their valuation is based off a model for which all significant assumptions are observable in the market.

(5) Fair value measurements of derivative assets and liabilities as of September 30, 2015 are included in 20.A.(1) and 20.A.(2).

B. The Company provides additional fair value information in Notes 8, 10 and 11.
